

SilverFast Ai IT8 6.6 for Braun Multimag SlideScan 4000 ED

SilverFast contains a bunch of features which are not included in the manufacturer's software.
Take advantage of these features and get the best results possible by using SilverFast!

inkl. 35mm transparency
target for IT8 calibration

**technical data and features**

Feature*	description
Auto IT8 Calibration	Get consistent colors with one single mouse click IT8-Calibration.
Kodachrome Feature	Enables color-correct scanning of Kodachrome slides.
iSRD	User-controlled removal of dust and scratches with infrared channel technology.
Multi-Exposure (optional)	Scanning slides Multi-Exposure improves the Dynamic Range of most scanners, reduces noise and brings up more picture details.
Preview Concept	Flexible zoom and preview concept with real-time preview of all SilverFast tools and operations.
Auto Adjust	One click optimization with Image Type presets.
NegaFix	Handles the conversion of negative film. The NegaFix Expert Mode allows to edit and generate custom negative profiles. 85 profiles are available this scanner.
Auto Frame	One Click - and all images in your prescan are framed.
USM	Luminance sharpening tool with preview of the final sharpening effect.
SCC	Manipulates and changes individual colors. Other colors remain unaffected.
SC2G	Allows distinguish different levels of gray when converting color images into grayscale images.
MidPip4	Helps remove up to four color casts in different neutral tones.
QuickTime Movies	Movies in each dialogue show and explain each function of SilverFast.

* click a feature (left column) to get more information through a QuickTime movie.

SilverFast Ai IT8 6.6 combines user-friendly operation with highly efficient professional functions. Beginners and professionals alike will appreciate the easy-to-handle, intelligent controls and the option to use not only automatic, but also manual controls.

Colour space with 100%-predictable results gives a new dimension to image processing and colour reproduction. Interaction with ScanPilot guarantees a precise workflow at any time. ScanPilot provides perfect support for inexperienced users, by guiding them step-by-step through the optimal workflow. Needless to say, the more advanced user also profits enormously from this powerful feature.

The professional user can of course enter numerical values for all operations and oversee the settings applied, with the aid of four free-floating densitometer points. If corrections are needed, they can be carried out quickly and reliably using one of the many image optimisation tools

How do I retain the dynamic range of my slides?

Websit

Image processing with full 48-bit colour depth is a real highlight! The scan can be processed not only as standard 24-bit output, but also in uncorrected 48-bit raw format (HDR format), or as a completely corrected 48-bit file. This guarantees optimal editing and processing of the original, by fully exploiting its maximum dynamic range. With HDR format, the user simultaneously has available an ideal archive format, to produce the desired quality with no losses at any time.

...and: Why is Multi-Exposure so important for this?

Websit

By scanning the same original twice, Multi-Exposure (patented by LaserSoft Imaging) ensures that the dynamic range of the scanner is significantly increased. Multi-Exposure can increase the performance of conventional small-image scanners so efficiently that the results reach the standard of drum scanners. This has been demonstrated convincingly by independent tests and measurements.

What is so special about auto IT8 calibration?

Websit

No other software-based IT8 calibration in the world exists in such an easy to operate and fully-automatic form. Also, scanner calibration needs no special skills: the SilverFast target is simply positioned in the film holder, and then the calibration process is started. Calibration is fully-automatic: just two clicks and 2 minutes later, the scanner is calibrated. Persuasively simple!

What are the advantages of LaserSoft Imaging IT8 targets?

Websit

- Higher precision than with other manufactures, as smaller units are produced and measured.
- Significantly better dynamic range
- Reference data is provided on the installation CD, or is automatically downloaded by the software directly from our website - brilliant!
- Cheaper!
- The target contains a barcode which automatically identifies the appropriate reference file. This does away with irksome "by-hand-allocation" – and by the way is a LaserSoft Imaging patent!

„Putting it plain and simple, SilverFast takes my scanners to a higher quality level - and I didn't just discover that this morning - I've been using this software for a long time.“

Shelly Katz
