SilverFast Universal Launcher v 3.0

Advantages over previous versions

The two main changes compared to previous versions of the Launcher are the completely new User-Interface and the Universal-Binary Format of the Mac Version.

At a glance:

- Completely revised user interface with tabs for the individual areas
- Simple handling of all installed *SilverFast* versions. The tabs clearly show which versions are currently installed on the computer
- Universal-Binary format for Apple Intel-Macs under Mac OS X
- Full compatibility for Photoshop CS3
- Multi-lingual: the new *Universal Launcher* may be switched into any supported language while running – no restart required.
- Helpful information: The „Extras“ tab offers a variety of Links to supporting *SilverFast* web pages on silverfast.com

SilverFast Universal Launcher as a Stand-Alone application

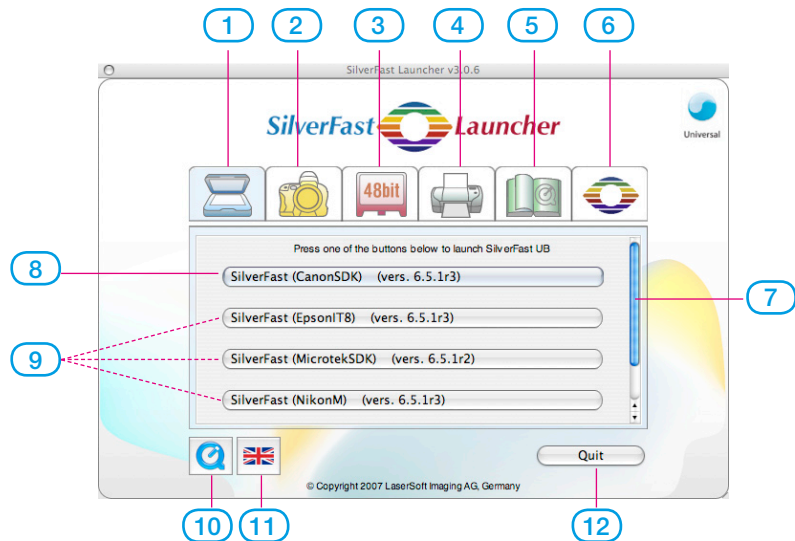

SilverFast Version 6.5.5r1 or later now offers *SilverFast Universal Launcher* version 3.

SilverFast may be used as an independent „Stand-Alone“- application by means of the *SilverFast Universal Launcher*. The advantage of the *SilverFast Universal Launcher* is that little memory is needed, and that applications can be launched much faster.

No additional applications are required for operating any *SilverFast* product under Mac and Windows.

Naturally, *SilverFast* can still be launched from within Photoshop and as a TWAIN module.

SilverFast Universal Launcher Overview

- 1-4 Modul tabs:** all installed versions of *SilverFast* are displayed here
