# SilverFast® X-Ray

## for medical radiographs

SilverFast X-Ray has been specifically designed for the digitization of X-Rays. Due to the individual adjustment to the characteristics of adequate scanners SilverFast X-Ray is able to get maximal details as well as the plentifulness of tonal values out of medical and scientific X-Rays. The easy use of the tools also enables users without special knowledge in image processing to obtain perfect scans.

*To scan X-Rays demands a great deal of quality of the flatbed scanners' transparency units. The elementary highlight and shadow details are inaccessible with low-end scanners yet essential from a medical point of view. Consequently only few modern scanners fulfill these requirements.
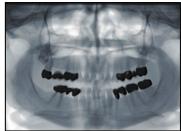

**LaserSoft Imaging®**

## SilverFast X-Ray Highlights

- Special x-ray automatic functions

- Full screen preview, can be zoomed as required

- Complete, individual control of the tonal values

- Real time processing and WYSIWYG-control on the monitor,

  before scanning

- Use of IPTC data
